

Tourist Programs Management System

A Full-Stack Web Application

➤ *Croisières en Méditerranée*

➤ *Activités aquatiques*

➤ *Visites*

PROJECT OVERVIEW

A web app for managing tourist programs, including viewing, creating, and customizing programs, with additional features like weather updates, notifications, VIP services, and challenges.

OBJECTIVES

PRIMARY GOAL

Provide a platform for users to manage and customize their tourist programs

SECONDARY GOALS

- Enhance user experience with weather updates and notifications.
- Offer VIP services with levels and rewards.
- Integrate partner company programs.

TECHNOLOGIES USED

Frontend: Vue.js, Tailwind CSS

Backend: PHP (Laravel)

Database: MySQL

Hosting: Apache/Docker

Version Control: Git/GitHub

FUNCTIONAL REQUIREMENTS

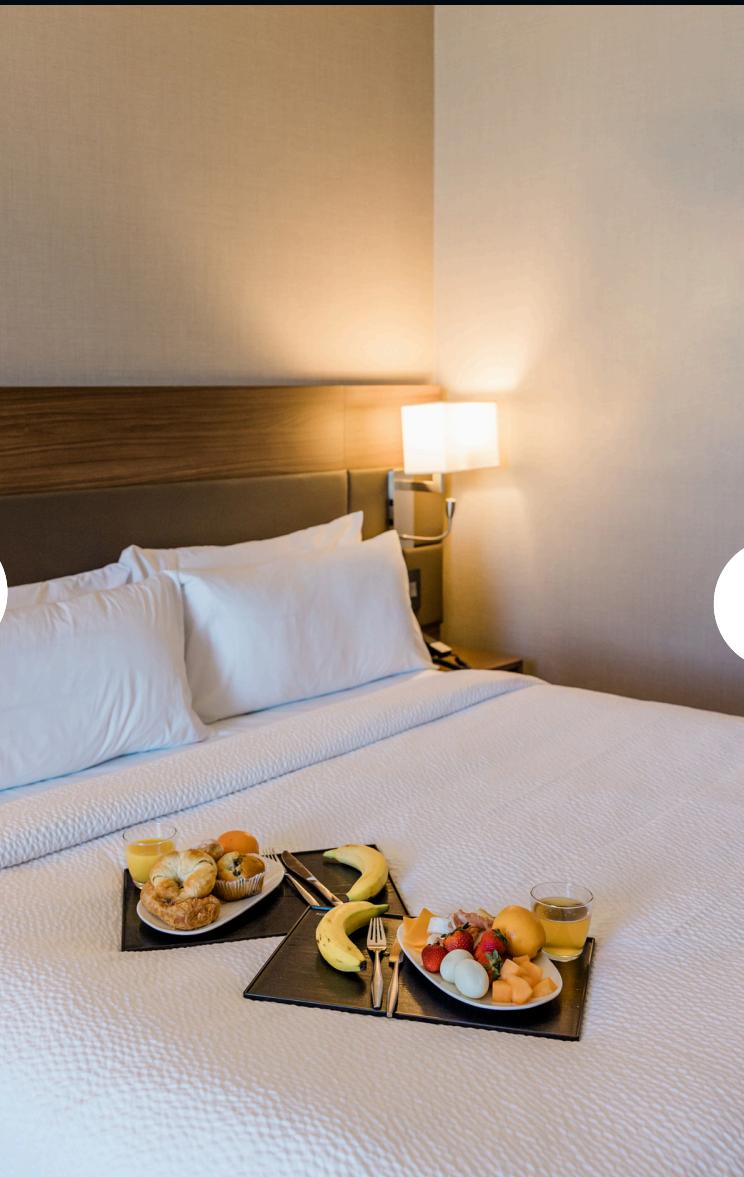

- User Authentication
- User Dashboard
- Program Features
- VIP Services and Rewards & Challenges
- Weather Updates
- Notifications
- Hotels Booking
- Geolocation and Mapping

FEATURES

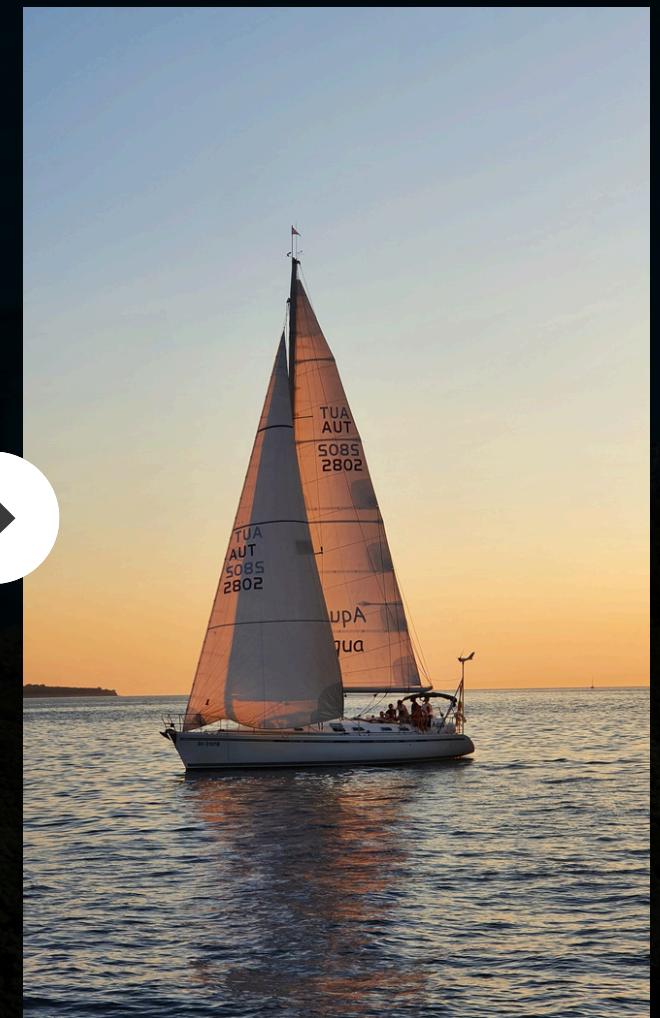

- Weather Updates: Real-time weather information.
- Notifications: Alerts for program updates and reminders.
- Challenges: Incentives for users to complete programs and earn rewards.
- Levels: Users can level up by completing programs.
- Rewards: Discounts on programs and other benefits based on VIP levels.
- Progress Tracking: Users can track their progress and see the benefits of leveling up.
